

THIAGO FERNANDO BAEZ

COMPUTER ENGINEER TO BE

ABOUT ME

I consider myself a curious, responsible and persistent person. I am self-taught: when something interests me, I learn it on my own and don't let go until I understand it. I am committed to what I do, I enjoy working in a team and sharing what I know, and I take on every challenge with initiative and the drive to keep growing.

EDUCATION

Universidad de Buenos Aires

Computer Engineering, 2022 - Present

School of Engineering (FIUBA)

About to graduate

SKILLS

Languages
Python, Go, TypeScript, JavaScript, Java, C, C++, Assembler x86, HTML, CSS

Backend & mobile
FastAPI, Node.js, NestJS, React Native (Expo), REST APIs, WebSockets

Data & messaging
PostgreSQL, MySQL, MongoDB, Redis, RabbitMQ

Infrastructure & deployment
Docker, Kubernetes, Linux, Apache, Nginx, Cloudflare, Render, Railway, Vercel, Supabase, GitHub Actions (CI), TCP/IP networking

LANGUAGES

Spanish — Native

English — Intermediate (B1, PET)

PROJECTS

ParkLink parklink.com.ar ↗

Lead developer, 2026 - Present

- Built an app to book and pay for parking in Buenos Aires: mobile app, 6 microservices, gateway, admin dashboard and landing page. Author of 70% of the project code.
- Backend in Python, Go and TypeScript with PostgreSQL/PostGIS, RabbitMQ events, Mercado Pago payments, Firebase push notifications and Cloudflare R2 storage.
- Infrastructure & deployment: Docker Compose, Cloudflare (DNS and Tunnel), Render, CI with GitHub Actions and mobile builds with EAS.
- Security: JWT at the gateway, rate limiting, OWASP headers and production secret validation.

Tech: React Native (Expo), FastAPI, NestJS, Node.js, Go, PostgreSQL, RabbitMQ, Docker.

Discordia

FIUBA · Software Engineering II, 2026

- Real-time chat with servers, channels, roles and permissions, messaging and voice channels.
- Python and Go microservices behind a KrakenD gateway, Redis Streams events, LiveKit (WebRTC) voice and CI with GitHub Actions.

Tech: FastAPI, Go, PostgreSQL, Redis, TypeScript, Render, Vercel.

Counter-Strike 2D

FIUBA, 2025

- Client-server multiplayer game in C++20. I built the client: graphical interface, audio, input events, maps and animations.

Tech: C++20, SDL2pp, Qt6, YAML, GTest, Valgrind.

Other academic projects

- **El Zorro y las Ocas:** full board game written in x86 Assembly (NASM).
- **Robots:** strategy game in Java with a JavaFX interface and OOP.
